

ENVIRONMENTAL LEAD NEWSLETTER

July - August 1999

Updates and Announcements

Loss of Certification/Removal From Listing

The certification of several individuals have expired, therefore their names have been removed from the listing in this newsletter. In addition, several workers certification have expired. The certification of other individuals will expire in the next few months. The dates of expiration are indicated next to the name in the listing. **The names and discipline of these individuals whose certification has expired are:**

Risk Assessors

Scott Harris
Barry King
Roger Ward

Workers

Robert A. Probus	Anthony D. Porter
Kevin T. Pearl	Abe Marshall
Raymond B. Johnson	Labon Gardner
John W. Collins	Jesse S. Moore
Michael Holland	Mickey D. Peterson
Ricky D. Hollan

Lead Hazard Company/Supervisor Issues

Clarification Regarding Abatement and Occupant Protection Plans

As indicated in previous issues, either a certified lead-hazard supervisor or a certified project designer can prepare plans, if the project includes less than ten (10) residential units.

Only a certified project designer can prepare these plans, if the project includes ten (10) or more residential units.

- The certified supervisor or certified project designer who prepares this plan shall be available to the lead abatement workers while lead-abatement activities are conducted; and be on site during the work site preparation; and the post lead-abatement cleanup of work areas.
- The certified supervisor or project designer must also be indicated on the abatement permit application.

As indicated in regulatory requirements, an abatement plan shall be a detailed, written description of the abatement. The specific agency requirements include the following:

- Name and certification number of the individual who prepared the plan
- Name and certification numbers of all individuals working at the site
- Copy of project specifications
- Location of abatement site (street address)
- Type of structure (i.e. brick, wood – one, two story, etc.)
- Anticipated start and finish dates
- Sequence of work activity (i.e. flow or work, steps, plan of removal or replacement in chronological order)
- Abatement methods to be used (including location of plastic sheeting, etc.)
- Enclosure and containment locations.
- Locations of rooms and components where abatement will occur (including floor plans, sketches, etc.)
- Reason for the selection of particular abatement methods for each component.
- If encapsulants are used, provide product usage information, etc.
- Cleanup measures
- Name and address of individual conducting clearance testing
- If the clearance individual is an employee of the Abatement Company, include the name of laboratory to be used to conduct analysis of dust wipe samples, etc.

Continued from page 1 - Updates/Announcements

Department of Public Health/Regulatory Changes

Notice of Intent to Amend 902 KAR 4:090. Lead poisoning prevention. This administrative regulation was first promulgated as a response to the "Lead Poisoning Prevention Law" KRS 211.900 to 211.905 (effective July 1974).

KRS 211.901(6) provides that local boards of health may by the adoption of local administrative regulations establish programs for the prevention, screening, diagnosis, and case management of children with lead poisoning. Intended changes are:

- The investigative and inspection response to lead levels in blood indicated in the present regulation will conform to new "elevated blood lead level" reporting and action levels established by the Center of Disease Control.
- Provide new lead standards and action levels for paint, dust and soil that relate to new environmental lead rules and regulations.
- Definitions used in the regulation, lead hazard identification, inspection and lead hazard abatement requirements will conform with new Federal Environmental Protection Agency rules and the new Kentucky environmental lead law.
- In summary, the proposed amendments to this regulation are necessary in order to conform to "new" federal guidelines and rules; and "new" inspection, assessment, and abatement requirements as required by "Kentucky Environmental Lead Law" KRS 211.9061 to 211.9079 (effective July 1 1996).

Certified assessment and abatement individuals need to be aware that, although the mandate of the "Lead Poisoning Prevention Law" and the actions identified in the regulation primarily relate to prevention, reporting and medical action related to lead poisoned children; there is an environmental component which involves the determination and location of lead-hazards, and if appropriate the abatement of such hazards.

NEW "PRE-RENOVATION EDUCATION RULE"

As stated in last month's issue a new Federal EPA rule went into effect as of June 1999 that required specific education and record keeping. Specific EPA printed materials are to be used. Although this agency's responsibility at this time will be to provide limited consultation to regulated community and report any complaints or violations of the rule to EPA, we are

finding through educational efforts that most companies are not aware of these requirements.

What types of Activities are subject to the Lead Pre-Renovation Education Rule?

In general, any activity that disturbs paint in pre-1978 housing, including:

- Carpentry
- Remodeling and repair/maintenance
- Plumbing
- Electrical Work
- Window Replacement

If a company is hired to do **Lead-abatement work only**, the Pre-Renovation Education Rule requirement does not apply.

These requirements are simplified in a new pamphlet titled "Interim Edition – June 1999 Handbook for Contractors, Property Managers, and Maintenance Personnel," which can be provided to you by this agency upon request.

Cont. from page 1

An occupant protection plan shall:

Be unique to the residential dwelling or child-occupied facility and shall be developed prior to the abatement.

The plan must be a detailed; written description of the measures and management procedures that will be taken during the abatement. If applicable, this information can be included in the abatement plan.

Inspector/Risk Assessor Issues

As noted in regulatory requirements, an EPA recognized laboratory must be used when a certified individual conducts a lead as noted in regulatory requirements, an EPA hazard assessment or inspection where samples are collected that require laboratory analysis. In actuality, this means that the laboratory has demonstrated under the National Lead Laboratory Accreditation Program (NLLAP) the ability to accurately analyze paint chip, dust or soil samples.

- Note that the laboratory may choose to be recognized for one, two, or all three of these type samples.

Individual certified Lead Hazard Workers associated with the above companies are not listed but can be obtained by contacting the environmental lead program.

Continued from page 2

Inspector/Risk Assessor Issues

Certified inspection and assessment individuals should request accreditation information from each laboratory that is used.

- Accreditation "thus recognized by EPA and state regulation" is required.
- The name and address of the laboratory must be included in the inspection, lead-hazard screening, lead-risk assessment reports.
- Also, note that it is also a requirement that this information be included in the final clearance inspection report after an abatement activity is conducted.

It is important that the information should be placed in a file for future reference if the validity of an inspection, assessment or abatement action as a result of the findings is questioned.

To obtain a current listing of laboratories recognized by the EPA NLLAP call The National Lead Information Center toll free at 1-800-424-LEAD or visit the Internet site www.leadlisting.org.
